"JOURNEY"

All those who journey,
soon or late,
Must pass within the garden's
gate,
Must kneel alone in darkness
there,
And battle with some fierce
despair,
God pity those who cannot say,
"Not mine but thine"
Who only pray
"Let this cup pass"
And cannot see
The purpose of Gethsemane.

Take care of your tires.

At any speed, a tire failure can be hazardous. You have an obligation to yourself, your family and other drivers to prevent tire-failure accidents.

Be on the lookout for possible trouble — cuts, cracks, uneven wear, cupping and inflation problems. Rotate tires every 5,000 miles. Inspect them often; remove rocks, nails or glass that is jammed between tread grooves.

Most important, don't drive on tires you aren't sure of.

"The South 40" by JAMES A. SMITH EXTENSION AGENT

This week the big concern is cutworms - cutworms in corn and tobacco. Wireworms also have been tagged as a major problem in some corn.

A few growers take out "fire insurance" and put out an insecticide either before planting corn or at the time of planting. More would probably follow the practice, but it's relatively expensive. In some cases it is necessary to disc the material in which is an extra trip across the field or granular applicators are required for the corn planter.

Two weeks ago in this column, I outlined how to determine whether to replant - - follow that guide.

We don't have a good recommendation to make if damage is occurring to corn. Some work has been done with Diazinon AG 500 at the rate of one quart per acre. Mix it with drop nozzels in 7 to 8 inch bands. If this route is taken, only fair control should be expected.

Tobacco is a high income crop and needs to be protected. Again, we don't have a real solid recommdnation to make. First of all, determine if you need to treat. This can be done by cutting off Red Clover and putting small piles of it at random across the field. If it's a 4 or 5 acre field prepare 10 to 12 piles of Red Clover; leave it for a couple of days. If you average one cutworm under each pile of clover, be prepared to treat.

Extensive research is being done this year on cutworms; hopefully another year we will have firmer control recommendations.

One caller asked why when spraying grapes with Ferbam a black circle appears around the bottom of the berries. This was particularly objectionable on white skin grapes. The response, "Yes, it is a Ferbam residue." Discontinue using Ferbam; Phalton will do an equal job without the objectionable ring.

Notice how ragged some Sycamore Trees are while others are in full leaf. The cause of the ragged appearance is a disease called Anthracnose. It affects the appearance of the tree, but probably will not kill the tree.
